DOCKETED BY

nr

To
Honorable Sen. John McCain
United States Senate
241 Russell Senate Bldg.
Washington, D.C. 20510-0303

cc: Honorable Sen. Jeff Flake

Mr. McCain:

I am writing you about a National Program called Smart Meters that was instituted through the Obama Administration to implement all states with switch over of these Smart Meters. There has been a growing concern for health problems believed to have link to the installation of these Meters and the radiation from the radio signals emitting from them to the head office. Causing headaches, nausea, heart palpitations ect.

I believe this to be a federal, as well as a state, issue since it was originated out of the Obama Administration. It has been publicized that no evidence has been found linking them to the smart meters, but there has also been no evidence found to the contrary. But the symptoms seem to show up right after

installations take place. This should be credible enough to require a moratorium on these installations until it can be determined for sure they pose no health threats to families.

A.P.S. is preparing to do installations of these meters in Williams and the Coconino County area where I reside. I am skeptical of having this meter installed because nothing has been put in writing that they pose no threat to health issues. I was informed that you can opt out for a fee of \$75.00 and have your monthly bill go up an additional \$30.00.

I feel this is inappropriate to force you to pay these fees or have your power cut off for taking the opt out. I believe it is only fair to expect them to acknowledge to the consumer that they pose no health threat or allow you to opt out without these fees. This is like penalizing you to opt out without them having to let you know whether they are safe or not.

There is also a question of how much personal information they can obtain from these meters as they are called smart meters because they can tell whether you are or aren't home, what device you are turning on, etc. and what they are going to do with this information, are they going to violate privacy laws. They are now into your phone conversations, e-mail, YouTube, are they now using this as a method of infiltrating your home? I don't have much trust in my Govt. anymore.

Several states are now, or have already banned their installation until they are assured that they pose no health threat. We need our federal and state representatives in our corner to protect our families from these kind of practices.

I have given A.P.S. a letter to opt out for reasons stated, of which I

am including a copy of . I am hopeful that this matter can be resolved with out putting consumers in ths unacceptable position.

Thank you,
Respectfully awaiting your reply

A handwritten signature in cursive script, appearing to read "John Lee".

John Lee

Copy of Letter presented to A.P.S.

Date of letter

NOTICE OF NO CONSENT TO TRESPASS AND SURVEILLANCE, NOTICE OF LIABILITY

Dear (Energy Provider) and all agents, officers, employees, contractors and interested parties,

If you intend to install a "Smart Meter" or any activity monitoring device at the above address, you and all other parties are hereby deny consent for installation and use of all such devices on the above property. Installation and use of any activity monitoring device is hereby refused and prohibited. Informed consent is legally required for installation of any surveillance device and any device that will collect and transmit private and personal data to undisclosed and unauthorized parties for undisclosed and unauthorized purposes. Authorization for sharing of personal and private information may only be given by the originator and subject of that information. That authorization is hereby denied and refused with regard to the above property and all its occupants. "Smart Meters" violate the law and cause endangerment to residents by the following factors:

1. They individually identify electrical devices inside the home and record when they are operated causing invasion of privacy.
2. They monitor household activity and occupancy in violation of rights and domestic security.
3. They transmit wireless signals which may be intercepted by unauthorized and unknown parties. Those signals can be used to monitor behavior and occupancy and they can be used by criminals to aid criminal activity against the occupants.
4. Data about occupant's daily habits and activities are collected, recorded and stored in permanent databases which are accessed by parties not authorized or invited to know and share that private data by those who's activities were recorded.
5. Those with access to the smart meter databases can review a permanent history of household activities complete with calendar and time-of-day metrics to gain a highly invasive and detailed view of the lives of the occupants.
6. Those databases may be shared with, or fall into the hands of criminals, blackmailers, corrupt law enforcement, private hackers of wireless transmissions, power company employees, and other unidentified parties who may act against the interests of the occupants under metered surveillance.
7. "Smart Meters" are, by definition, surveillance devices which violate Federal and State wiretapping laws by recording and storing databases of private and personal activities and behaviors without the consent or knowledge of those people who are monitored.
8. It is possible for example, with analysis of certain "Smart Meter" data, for unauthorized and distant parties to determine medical conditions, sexual activities, physical locations of persons within the home, vacancy patterns and personal information and habits of the occupants.
9. Your company has not adequately disclosed the particular recording and transmission capabilities of the smart meter, or the extent of the data that will be recorded, stored and shared, or the purposes to which the data will and will not be

put

10. Electromagnetic and Radio Frequency energy contamination from smart meters exceeds allowable safe and healthful limits for domestic environments as determined by the EPA and other scientific programs.

I forbid, refuse and deny consent of any installation and use of any monitoring, eavesdropping, and surveillance devices on my property, my place of residence and my place of occupancy. That applies to and includes "Smart Meters" and activity monitoring devices of any and all kinds. Any attempt to install any such device directed at me, other occupants, my property or residence will constitute trespass, stalking, wiretapping and unlawful surveillance and endangerment of health and safety, all prohibited and punishable by law through criminal and civil complaints. All persons, government agencies and private organizations responsible for installing or operating monitoring devices directed at or recording my activities, which I have not specifically authorized in writing, will be fully liable for any violations, intrusions, harm or negative consequences caused or made possible by those devices whether those negative consequences are justified by "law" or not.

This is legal notice. After this delivery the liabilities listed above may not be denied or avoided by parties named and implied in this notice. Civil Servant immunities and protections do not apply to the installation of smart meters due to the criminal violations they represent.

Notice to principal is notice to agent and notice to agent is notice to principal. All rights reserved.

Stop Smart Meters!

Fighting for your health, privacy, and safety

PG&E Begins Removing 'Smart' Meters Due to Health Effects

Posted on November 1, 2011 by [onthelevelblog](#)

Widening Call for Immediate Return of Analogs;
Disconnection of "Mesh" Wireless Network

UPDATE, Nov. 3, 2011: Glendale CA resident also has 'smart' meter replaced with analog meter by utility GWP. Video: http://www.youtube.com/watch?v=T_jT3-36KRg

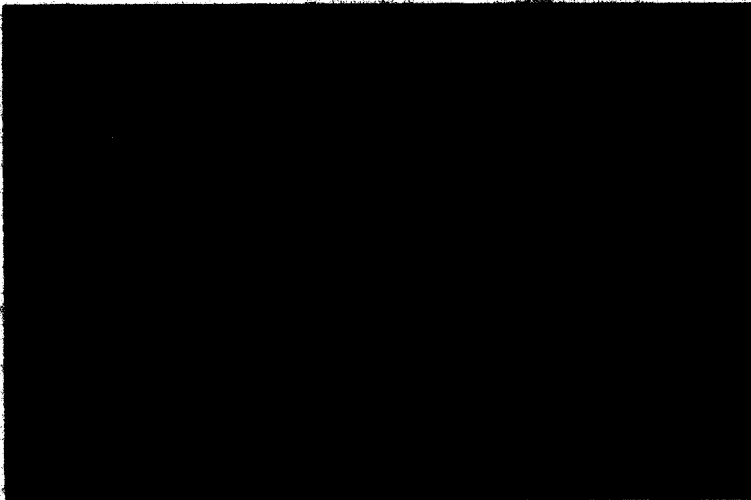

SANTA CRUZ, CA—Just as PG&E enters the final phase of its deployment of wireless "smart" meters in California, the largest of the state's Investor Owned Utilities (IOU's) has reversed course, quietly beginning to replace the 'smart' meters of those reporting health impacts with the old trusty analog version. Consumer rights and health groups immediately seized on the news, demanding that millions of Californians unhappy with their new wireless meters get their analogs returned immediately at no cost.

'Smart' meters are new wireless utility meters being installed as part of the "smart" grid initiative, spearheaded by technology firms and backed by the Obama administration and the Department of Energy. Promises ranging from lower utility bills to enhanced renewable generation capacity have failed to materialize, with widespread reports of higher bills, privacy violations, fires and explosions, and commonly reported health impacts such as headaches, nausea, tinnitus, and heart problems associated with powerful wireless transmissions. Widely disparate political groups- from members of the Green Party to the Tea Party and Occupy protesters have attacked the program, and dozens of grassroots organizations have sprouted up over the past several months to fight what

they call an undemocratic, unconstitutional and dangerous assault on people in their own homes and neighborhoods. Dozens of people have been detained or arrested for peaceful civil disobedience and even simply speaking out against deployments.[1]

In California, more than 47 cities and counties have demanded a halt to installation, and a dozen local governments have passed laws prohibiting the controversial technology. [2] The 'smart' meter issue has further angered a public already seething at the utilities over repeated gas explosions, safety breaches at nuclear reactors, and an increasingly extortionate rate structure. Word of California's 'smart' meter nightmare has spread across the country and around the world, prompting some utilities to place smart meter plans on hold, and recently Nevada's PUC to call for investigations into the health effects and other smart meter problems.[3]

Now in a dramatic turnaround that could signal the beginning of a widespread recall of wireless 'smart' meters, on October 28th PG&E re-installed a classic spinning disc analog meter on the home of Santa Cruz, CA resident Caitlin Phillips, who had been suffering headaches and other symptoms from her 'smart' meter. The move comes in response to verbal directives from the California Public Utilities Commission President Michael Peevey, who recently told members of the public that **the utility "will provide for you to go back to the analog meter if that's your choice."** The CPUC has been slow to respond to thousands of ordinary citizens reporting health effects from the new meters.

When a Wellington Energy installer (contracted with PG&E) came to install a smart meter at her home, Caitlin asked the installer to get off her property and not install, because of what a neighbor had told her about possible health damage and privacy violations. "When I returned home later, I discovered a smart meter on my house. That night I awoke to severe anxiety, headache, and buzzing in my teeth, and realized the new smart meter was on the other side of the wall from my bed." Caitlin reported her experience to PG&E and the CPUC, who both declined to rectify the situation. When the symptoms persisted, Caitlin sought the assistance of the Scotts Valley based group Stop Smart Meters! who provided an analog meter and referred her to a professional who could help her remove her 'smart' meter. As soon as the analog was installed, Caitlin's symptoms disappeared.

Ban Texas Smart Meters: Right Now - Texans Are Fighting for the Right to Say 'No' to Smart Meters

Texans are gathering tomorrow for their freedom to choose to have "Smart Meters."

Austin, TX, July 13, 2012 - LIRPAGREEN issued the following statement on behalf of Ban Texas Smart Meters:

Texans are gathering for their freedom to choose to have "Smart Meters" installed or removed on the steps of the Austin's capital until the state takes up item 14 on Project 40404. Over 1 million Smart Meters were installed in Texas by a silent force. Now Texans are fighting. Consumers never had a right to choose and were smacked with additional fees. The electric monopolies like Oncor Energy and Centerpoint Energy used scare tactics, such as threatening to shut off power and fines for tampering if customers did not succumb, according to Ban Texas Smart Meters. The Austin protest is in response to Dewy Kid, Journalist and Activist getting repeatedly refused a trial by the PUC because of technicalities. This is just another instance of Texans standing up for their freedoms.

Utility companies are swapping out electric, gas and water analog utility meters and replacing them with pulsed microwave radiation (RF) Smart Meters, which are costing consumers more money, privacy, and there has been numerous health and safety issues documented. The new Smart Meter network is a 2-way data collection system with collection points on some consumer homes or businesses that may serve up to 5000 customers' meters. The collection points are assigned to certain customer homes or businesses without customers' knowledge or consent; the customer is exposed to higher levels of continuous radiation. Additionally, it is unlawful to use one customer's premises to service another customer.

After consumer and state officials push back to the utility companies outside of Texas, some utility companies allowed opt-outs, including California, Maine, Nevada and Oregon. Smart meters got a big boost in 2009, when the Obama administration devoted \$3.5 billion of its \$787 billion economic stimulus package to grants to help utilities install the new technology. Most states with opt-outs can charge fees for not switching over. In addition to the health and the freedom to choose controversy, people are wondering why the extra fees when the labor is smaller, the systems are "more energy efficient" and their tax dollars paid them to make the transition.

The march is being led by a web based organization called Ban Texas Smart Meters. Their goal is to halt further installation, ban the product all together or force utility companies to add opt-outs.

Tennessee Smart Meter Opt-Out Petition

- Author:
n/a
- Send To:
Governor Haslam and Attorney General Robert E. Cooper, Jr.
- Sponsored By:
- More Info at:

Are you the Author?

"Smart" meters do not save energy. The Smart Grid is part of the long-range plans the energy industry has to save itself money and be able to charge you more. This is the "big picture inevitability if our future depends on the growth of technology. What is NOT inevitable or required is the use of WIRELESS tech.

Too many suppressed or ignored studies plus the large and rapidly increasing number of reports of resultant health problems mandate that the onslaught of wireless tech development & safety becomes a priority and can be guaranteed.

The "smart" meter program creates a pervasive electromagnetic field, and there are no studies yet published on the smart meter that indicate that the levels of EMF emitted -- collective safe. The "safety" standards the meters comply with are irrelevant to the situation, and were not designed to protect the public from health problems under the circumstances in which they are used. Because the Smart Meter system is a mesh network, it is impossible to predict individual levels of exposure with any consistency or certainty. The un-safeness of the "safety" standards for continuously transmitting "smart" meters is apparent from the reports of health problems, ranging from headaches to poor sleep to heart palpitations, that can begin after their installation. Fires that are under investigation and the cause is thought to be the smart meter.

The stated objectives of the Smart Grid Program can be accomplished without transmitting meters -- but better yet would be a switch to "WiseGrid" solutions based on regionally appropriate renewable energy sources, guided by efficiency and conservation, which can be realized without the looming health, environmental, privacy and security hazards posed by wireless, hazardous systems. This is a smarter path -- better for humans and other living things, better for the planet and better for democracy.

Please join with us in doing what is right for the good people of Tennessee and stop the implementation of "mandatory" Smart Meters. This is America and our citizens should have the right to want this kind of technology installed on their homes. As free people we demand the right to opt-out of this program.

smartmeters

Stop Wireless Smart Meters in Tennessee**Tennessee Smart Meter Opt-Out Petition****Tennessee and National Action Alert!**

Cleveland Utilities has recently taken stimulus dollars to install Smart Meters on homes and businesses

TENNESSEE LEGISLATURE HOUSE MEMBERS- CONTACT INFORMATION**TENNESSEE LEGISLATURE SENATE MEMBERS- CONTACT INFORMATION**

TVA – TENNESSEE VALLEY AUTHORITY, BIG SALARIES, BIG BONUSES, BIG BROTHER SMART METERS, TIME OF USE RATES, SKYROCKETING UTILITY BILLS

Your home or business that uses a utility meter is a fixed location. Why does Cleveland Utilities want to change to wireless SMART METERS? Wireless smart meters are cheaper for utilities. If you are concerned about your privacy, security and health, and want an alternative to wireless smart meters, is Cleveland Utilities listening?

Cleveland Utilities is not offering an opt out or wired meters to their radio frequency wireless smart meters. Utilities want to save money, pay big salaries and bonuses, and yet charge you more for electricity use during certain times of the day. They also want to gather information about you and about your use of energy. There are third parties waiting in the wings, salivating for personal data, offering devices, appliances and other offers with information that they hope to receive about you from the utilities.

TVA, Cleveland Utilities plan to introduce time of use rates in 2011-2012. If this plan goes forward, you as a utility customer will be “nudged” or forced into changing your behavior, when you use electricity. The utilities want you to shift your use of energy to off peak hours. Should we believe that TVA and Cleveland Utilities want to lose money as you are pressured into cutting or altering your energy use. You will lose freedom to choose how you use energy as government holds the remote control. Flat rates and once a month meter readings will be gone. Government bullies want to know what you do at home when it comes to energy use. They will have the power to ration and shut off your utilities if they so desire.

The following individuals do not mind if you pay higher utilities rates. They are millionaires who can afford higher utility rates. Can you? They also want you to have a smart meter. Senator Lamar Alexander wants you to pay higher utility rates and to have a smart meter.

Wind turbines tower over an observer at Perrin Ranch wind farm. (Josh Biggs/Arizona Daily Sun)

Josh Biggs

Buy Now

CYNDY COLE Sun Staff Reporter

(13) Comments

Only months after Coconino County's first major wind energy farm got up and running this winter, the utility buying its power says more wind farms here are unlikely -- at least for now.

Cost is the bottom line, with the sun beating the wind on both equipment prices and time-of-day power production.

This disadvantage for wind could have some implications for a handful of other big wind projects proposed in Coconino County.

A worldwide glut of solar panels produced at lower costs (including from China) has cut solar panel prices to a fraction of their former cost.

So Arizona Public Service is likely to turn to solar in the coming years to meet a state mandate that it generate 15 percent of its energy from renewables by 2025. APS gets about 5 percent of its electricity from renewable sources today.

"Right now, it looks like solar -- photovoltaic -- is the lowest-cost resource," said Gordon Samuel, who plans future energy supplies at APS.

Also, the wind here doesn't produce enough power when APS and Phoenix need it most: on hot summer afternoons.

While Flagstaff is fine for solar electricity generation, Samuel said, Gila Bend and the Yuma area are even better for the big power demands of the Phoenix region, so those locations are more likely to be sites for future projects.

PERRIN RANCH THE LAST?

This all comes not long after Coconino County supervisors approved by a narrow margin in February 2011 the installation of 62 wind turbines, each about 400 feet tall, on a ranch 13 miles north of Williams. A group of neighbors argued last year during 13 hours of public meetings that the turbines at Perrin Ranch would affect the tranquility of the landscape and not generate all that

much power.

at a supervisors meeting earlier this month that Samuel said more wind projects were not right now and outlined the reasons.

"It was all I could do not to jump up and down and yell 'I told you so! I told you so!'" said Linda Webb, an outspoken opponent of Perrin Ranch. "But we were a little more restrained than that."

There are no wind projects for Arizona outlined in a document APS put out in March to show where it might find renewable energy into future years.

The Perrin Ranch wind farm is one of the larger renewable projects APS has today. But when running at full capacity, it generates only about 10 percent of what a natural-gas-fired plant in Phoenix can produce.

Samuel said Perrin Ranch was competitive a couple of years ago when APS signed contracts with a developer, but that was before photovoltaic prices plummeted.

"The economics did look attractive," he said.

A SURPRISE TO ALL

Coconino County was planning for more renewable energy here, and its planning and zoning commission was weighing overall guidelines on where renewable energy should or shouldn't be located, along with avoiding risks to birds and bats.

Coconino County Supervisor Carl Taylor has been the board's most vocal proponent of renewable energy, better-insulated homes and water conservation measures.

He and others were surprised by APS's announcement earlier this month.

"That was quite a surprise to all of us," he said.

Cyndy Cole can be reached at 913-8607 or at ccole@azdailysun.com.
